

Heathrow
Cargo

Heathrow CargoCloud

The Heathrow CargoCloud is a load consolidation tool that will allow shippers, trucking companies and freight forwarders to match loads to spare capacity by providing transport data on loads travelling to and from Heathrow Airport, helping to:

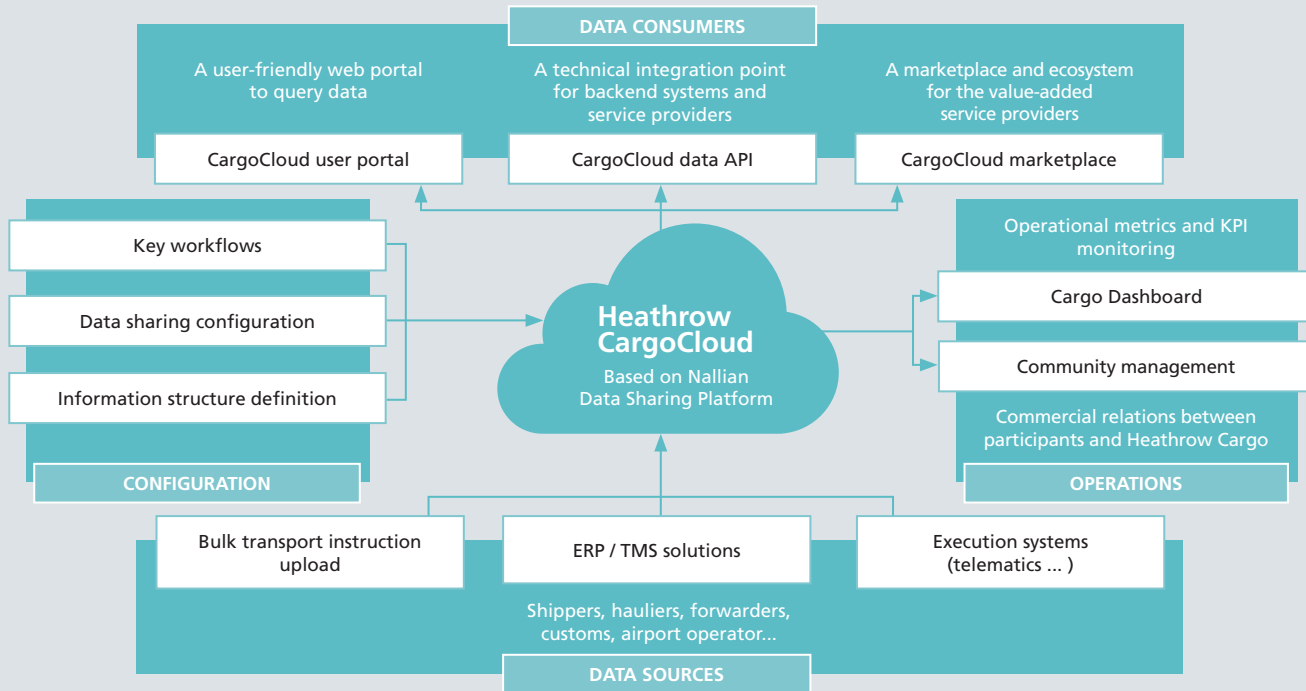

- Decrease the amount of cargo-related vehicles on the roads around Heathrow
- Reduce transportation costs for forwarders
- Reduce CO₂ emissions
- Improve load factor.

Heathrow

Based on the Nallian data sharing platform, the application will include:

- Direction of travel (from / to Heathrow)
- Origin or destination location
- Time and date of delivery / collection
- Load product information (to assess compatibility)
- Details of load restrictions / equipment required
- Available capacity on the vehicle.

We're looking for early adopters to take the lead by piloting the tool and begin to realise the benefits. So to register your interest, email cargo@heathrow.com
